Heron

COFFEE TABLE

Heron artistic brass casting coffee table interprets metal through a light, simple yet deeply textured presence. The top is obtained using artistic sand casting, an ancient technique that gives the surface visual variations, irregularities and traces that make each piece unique.

The slender design contrasts with the expressive strength of the material. Heron retains a clean, versatile profile while revealing the depth of handcraftsmanship in its top, where metal preserves the memory of the process and acquires an almost sculptural quality.

Available in different sizes and heights, Heron can stand individually beside seating compositions or create arrangements with other elements in the collection. Within HESSENTIA's design language, it combines functionality, artistic casting and contemporary Handmade in Italy sensitivity in a discreet yet striking table.
