Islaout

MODULAR SOFA

Islaout modular sofa is a seating system designed to create islands of relaxation within covered outdoor spaces sheltered from the elements. The collection interprets outdoor furniture through soft volumes, modularity and a structure raised from the ground, allowing welcoming compositions to be created without sacrificing visual lightness.

Modularity is one of the main elements of the design. With a limited number of modules it is possible to develop linear, corner or semicircular configurations, adapting the system to the proportions of covered terraces, verandas and protected porticos. Each element can also be used individually, further expanding the compositional possibilities.

The upholstered volumes are covered in outdoor fabrics with customizable combinations and are raised from the ground on four cylindrical iroko wood feet available in different colours. The contrast between the continuity of the soft surfaces and the punctual presence of the wood lightens the composition and makes the construction of the individual modules clearly recognisable.

Removable cushions with removable covers contribute to comfort and facilitate maintenance. The different configurations allow to create areas dedicated to conversation and relaxation while maintaining a coherent language even in larger compositions. The system can also be used in contemporary interiors.

Handmade in Italy, Islaout interprets contemporary outdoor living through modularity, comfort, fabrics designed for exterior and an iroko wood structure, creating flexible compositions in which each element retains its own autonomy.

The **Hessentia Outdoor collection** is designed and intended exclusively for use in covered outdoor spaces protected from weather agents, such as verandas, porches, and covered terraces.
To preserve the aesthetic, functional, and material qualities of the products over time, weekly routine maintenance is highly recommended.
Furthermore, any food and drink residues, leaves, flowers, pollen, or bird droppings should be removed promptly to prevent prolonged contact with the surfaces from compromising the long-term preservation of the products.
