Cubotto

STORAGE UNIT

Cubotto is a compact, sculptural storage unit, available in different lengths and characterised by flap doors. The geometric simplicity of the shape brings the contrast between metal and colour into particular focus.

One of the design's distinctive features is bronze elements obtained through the traditional sand-casting technique. The artisanal process transfers subtle variations and material depth to the metal surface, preserving traces of its craftmenship.

Vibrant colours, available in different shades, complement the visual strength of bronze. The lacquer colour introduces a more graphic, contemporary quality, while the metal retains its tactile intensity.

The flap doors integrate the opening system into the geometry of the storage unit, keeping the front composition ordered when closed.

Available in several sizes, Cubotto can take on different proportions while retaining its identity. Material remains central, making the piece recognisable across different configurations.

For HESSENTIA, Cubotto brings the tradition of artistic metal casting into contemporary furniture design, balancing craftsmanship, colour and rigour of shape.

HESSENTIA can customize this piece to suit your project needs. Some limitations apply.
