Morgan

STORAGE UNIT

Generated: 25/11/2026

Morgan is a storage unit with four doors and two drawers, designed for the dining area and defined by a three-dimensional front in which leather craftsmanship determines the rhythm of the entire composition.

The doors are shaped through vertical slats upholstered in leather. Their sequence creates a pleated effect, articulating the surface through reliefs, shadows and perceptual variations, transforming the upholstery into an architectural pattern.

The opening system is integrated into the design through different solutions. A cylindrical element at the centre acts as a handle for the central door, while slender projecting metal strips allow the side doors to be opened.

Metal continues into the lower section through two bent blades that support the structure. The base introduces a precise accent beneath the upholstered structure, contrasting visual lightness with the tactile depth of leather.

The marble top has a recessed edge that visually reduces its thickness. The stone appears almost detached from the structure beneath it, while its veining introduces natural variation into the rigorous composition.

Within HESSENTIA's world, Morgan arises from the meeting of leather, metal and marble. Surface, opening system and structure are designed as parts of a single language, in which precision and softness coexist, each retaining its character.

HESSENTIA can customize this piece to suit your project needs. Some limitations apply.
