Domino

STORAGE UNIT

Domino is a storage unit in which the geometric rigour of the structure meets a richly textured exterior. Decorative resins, coloured pigments and natural materials compose the finish, making it one of the design's principal features.

The handcrafted resin structure offers a particularly rich visual and tactile experience. Resin worked with artisanal care and attention to detail gives the storage unit a strong identity, with variations that make each piece unique.

The doors are decorated with three-dimensional vertical lines. Their regular sequence creates rhythm and harmony, while light and shadow move across the surface, changing its appearance throughout the day.

Metal elements, also disposed vertically, contribute to the front design while keeping their opening function. The technical detail thus enters the composition while preserving its continuity.

Different material choices are available for the inside: oak is used for the structural parts, while the drawer bottoms are covered with saddle leather. The more expressive exterior is thus complemented by a more intimate, tactile and restrained interior.

Artistic resin, metal, oak and saddle leather follow one another like layers of the same architecture. Each material retains its character and serves a specific function.

Within HESSENTIA's world, Domino expresses contemporary storage unit through vertical decorative pattern, artistic resins exploration and attention to interior surfaces, combining decorative craftsmanship with the precision of construction characteristic of Handmade in Italy.

HESSENTIA can customize this piece to suit your project needs. Some limitations apply.
