Axis

BOOKCASE

Axis is a contemporary bookcase in which a vertical metal structure meets marble shelves, balancing structural lightness with the strength of the material. Its height defines a minimal, precise line, designed to enhance the natural expressiveness of stone. The metal parts have a highly expressive role that combines artisanal skill with artistic sensitivity.

The shelves appear suspended between the metal elements. The visual separation between the structure and horizontal elements gives the composition lightness, while marble introduces veining, depth and colour variations that make each configuration naturally different.

The stone acts as more than a support surface. Each shelf draws the eye, where the unique veining of marble contrasting with the regularity and precision of metal.

Axis is available in right and left configurations and it can be used individually or as a pair. Placing two bookcases together creates a broader, symmetrical composition.

The customisation allows the product to suit specific interior requirements. This bookcase is the perfect choice for a living area, home office or other contemporary ambiences while preserving the recognisable relationship between structure and stone.

Axis is suitable to be placed along a wall or in the centre of the room, where its structure becomes fully visible and contributes to separate different areas of the ambience, without rigid divisions.

Axis interprets HESSENTIA's exploration of the contemporary bookcase through metal, marble and geometric design, transforming the structure into a light, textured composition in which precision and depth find a harmonic balance.

HESSENTIA can customize this piece to suit your project needs. Some limitations apply.
