Itaca

LANTERN

Itaca is a contemporary lantern with a structure made of plywood rods. The repetition of the elements creates a volume in which wood defines shape, rhythm and material presence.

The rods articulate the surface in a regular sequence, revealing the structure as an integral part of the design. Solid elements and voids contribute to the composition, giving the lantern visual lightness.

The use of plywood introduces a material naturally associated with outdoor design into lighting. The construction remains visible, creating a direct relationship with the other elements in the Itaca collection.

The lantern is available in different sizes, allowing one or more elements to be used within the same composition. Variations in scale give the chance to create more intimate arrangements or larger configurations within the space.

Itaca is designed for panoramic terraces, large verandas and boats, alongside pieces of furniture from the same collection, helping to create outdoor ambiences with consistent materials and design language.

Itaca extends HESSENTIA's exploration of contemporary furniture into outdoor lighting through a lantern in which plywood, repetition and proportion define a presence that engages with the architecture and surrounding pieces of furniture.

If the product is intended for outdoor use, it is recommended exclusively for covered outdoor spaces protected from the weather, such as verandas, porticoes and covered terraces.

Routine maintenance is recommended on a weekly basis to preserve the products' aesthetic, functional and material qualities over time.

Any food and drink residues, leaves, flowers, pollen and bird droppings should also be removed promptly, as prolonged contact with the surfaces may compromise the condition of the products over time.

The **Hessentia Outdoor collection** is designed and intended exclusively for use in covered outdoor spaces protected from weather agents, such as verandas, porches, and covered terraces.
To preserve the aesthetic, functional, and material qualities of the products over time, weekly routine maintenance is highly recommended.
Furthermore, any food and drink residues, leaves, flowers, pollen, or bird droppings should be removed promptly to prevent prolonged contact with the surfaces from compromising the long-term preservation of the products.
