Brick

NIGHT TABLE

Brick storage unit is a versatile element built through the overlapping of lacquered rectangular volumes. The product can be used in the bedroom as a night table or in the living area as a sculptural coffee table.

The volumes have different proportions and are arranged in an apparently simple yet dynamic composition. The overlapping elements create a sense of depth, making the night table distinctive from every viewing angle.

The upper part can be rotated to reveal the compartment below. Inside, a marble surface introduces the uniqueness of natural stone.

Rotation temporarily changes the geometry of the piece and transforms opening into a design gesture. When the compartment is closed, the night table returns to a compact composition.

This night table is available in right and left configurations and can be customised through different lacquer finishes and marble selections.

Handmade in Italy, Brick interprets its function through overlapping, movement and the contrast between lacquered surfaces and natural stone.
