Oblique

MIRROR

Oblique is a contemporary mirror with a strong sculptural character, defined by a frame obtained through artistic bronze casting. The metal transforms the mirror's perimeter into a textured surface with a distinct visual presence within the ambience.

The frame is obtained through artisanal bronze casting technique. This craftsmanship reveals the nature of the metal and gives the surface a depth that contrasts with the clarity of the mirror's reflection.

The integrated lighting in defined areas directly influences the perception of the frame. Beyond illuminating the ambience, the light appears to travel across the cast metal surface, creating contrasts, shadows and variations.

The perception of bronze changes throughout the day: in natural light, the textured character of the casting comes to the fore; when the lighting is switched on, reliefs and surface variations become more pronounced.

Mirror, metal and light form three distinct layers of the same composition: the reflective surface captures the space, the frame defines its boundary, and the lighting reveals the material.

Oblique interprets the designer mirror through artistic casting and light, bringing artisanal bronze casting, one of the most distinctive processes in HESSENTIA's design exploration, into the world of accessories and interior ambiences.
