Isla

MODULAR SOFA

Within the HESSENTIA world, Isla modular sofa is a system designed to create contemporary islands of relaxation in indoor environments. The composition arises from the aggregation of soft, welcoming volumes, organized through a limited number of elements capable of generating configurations that differ in geometry and size.

Modularity allows linear, corner or semicircular compositions to be developed, adapting the system to the characteristics of the interior layout. The variety of configurations therefore does not depend on a large number of elements, but on the possibility of relating the individual modules through different orientations.

The design of the base allows each element to retain its own autonomy even when used individually. This feature expands the design possibilities and allows the composition to change over time while preserving the coherent formal language of the system.

This modular sofa can be completed with the circular sofa of the same collection, creating more articulated configurations in which modular elements and circular volume define different areas dedicated to seating and conversation. It can be customized through a selection of fabrics and leathers, allowing the chromatic character to adapt to the needs of the interior.

Handmade in Italy, Isla interprets the living area through soft volumes, modularity and compositional freedom, transforming a limited number of elements into a system capable of shaping space through different geometries.
