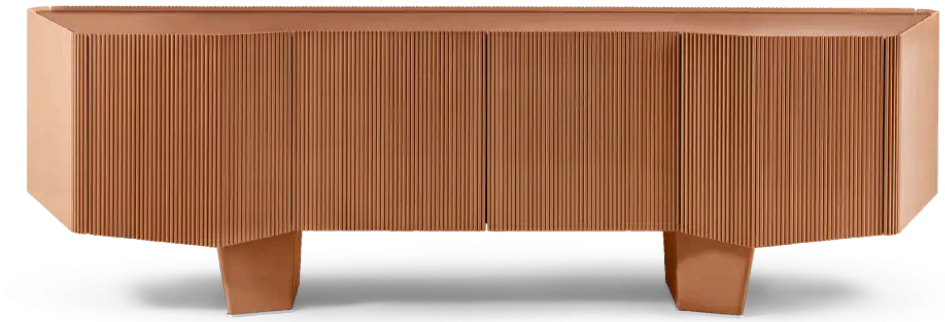
Diamond

STORAGE UNIT

Generated: 24/11/2026



Diamond is a contemporary storage unit distinguished by the balanced design of its double L-shaped base and the finely ribbed finish of its doors. Clear geometries form the composition, while the surface craftsmanship gives it rhythm and depth.

The two L-shaped elements support the structure of the piece and become a visible part of its identity. The base is perceived as a geometric accent that follows the horizontal shape of the storage unit, beyond its support function.

The doors have a ribbed pattern decoration. The sequence of vertical lines interrupts the continuity of the front, allowing light to move across the surface and create subtle visual variations.

The finishes are selected from a range of natural colours, allowing Diamond to sit within interior compositions while keeping its design clearly visible.

The storage unit is available with three to five outward-opening doors and in different sizes. Variations in length change its presence while preserving the relationship between base, doors and craftsmanship.

In HESSENTIA's interpretation, Diamond builds its identity through geometry and rhythm: decorative detail arises directly from the surface, rather than being applied to the shape..

HESSENTIA can customize this piece to suit your project needs. Some limitations apply.
