Geometry

WALL LAMP

Geometry is a contemporary wall lamp conceived as both a lighting system and a decorative artwork. Five geometric elements in brushed metal are disposed together on the wall to create a larger, customisable composition.

The distance between the individual elements can be adjusted, allowing the final configuration to be modified according to the surface on which it is installed.

The five parts have different dimensions: their relationship creates a rhythm in which solid volumes and the spaces between them are as important as the metal finish.

Light is diffused indirectly towards the wall. Reflections and shadows follow the different geometries, transforming the wall into a luminous display that actively contributes to the composition.

Geometry is suitable for living areas, as well as halls and reception spaces, where the option to extend the composition across the wall allows the lighting to take on a more architectural scale.

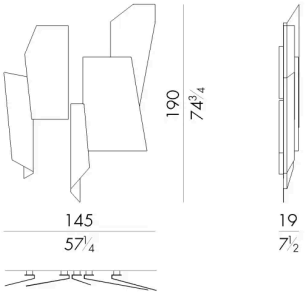

Geometry interprets HESSENTIA's wall lighting as a customizable design: metal, spacing, indirect light and shadows create a new geometric synergy within the surrounding space.
