Flucta

COFFEE TABLE

Flucta arises from the meeting of artistic brass casting and a refined composition of marble chips, inspired by the traditional flooring technique of historic Venetian palaces.

Marble chips create a richly varied texture, while the wave-shaped brass casting reveals the artisan's handwork, where skill becomes art and material gains soul.

Handcraftsmanship makes each surface unique, enhancing fragments, colours and material variations. Artistic metal casting gives the coffee table structure and presence, making it a decorative element with a strong character.

Within HESSENTIA's world, Flucta interprets the living area through an artistic, contemporary sensitivity. Selected marble chips, brass casting and graphic rhythm meet in a piece that combines craft heritage with design exploration.
