Bliss

COFFEE TABLE

Bliss interprets resin as a luminous, fluid and deeply expressive material. It arises from artistic craftsmanship that creates transparency, reflections and colour variations, giving each piece a different appearance.

Its shape, both rigorous and organic, completes the natural intensity of the material, revealing visual depth and lightness. Resin is used as a design element that gives the coffee table colour, volume and identity, beyond its decorative role.

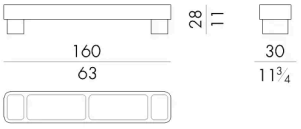

Within HESSENTIA's design language, Bliss becomes a poetic, contemporary coffee table for living ambiences in which light, material and form create a strongly recognisable presence.
