

From the craftsmanship of the Venetian masters is born lamp Yari, an element characterized by refined and accurate details. Yari, in fact, is unique because the upper part in blown glass, is embellished by embedded "murrine", which give a touch of color and informality to a product with linear shapes. The metal base is in contrast with the sinuous shape of the upper part, creating a pleasant contrast that gives the illusion to be a hot air balloon about to take flight.
