Oskar

DRAWER UNIT

Generated: 24/11/2026

Oskar chest of drawers is a bedroom storage unit characterized by the contrast between large rounded drawers and small metal handles. It belongs to Oskar collection, which also includes the coordinated night tables.

The deliberately different proportions between handles and drawers represent the main expressive element of the design. The large fronts define a continuous, compact surface, while the handles introduce small, functional details.

This chest of drawers is available with either a glossy or matt lacquered finish. The chromatic continuity enhances the rounded shapes and makes the piece suitable for different bedroom configurations.

Metal details with a brushed finish create a luminous contrast with the lacquered surfaces. The metal emphasizes the opening system without interrupting the overall order of the composition.

Oskar can be coordinated with the night tables of the same collection, creating a storage system consistent in shape, finish and proportion.

Handmade in Italy, Oskar chest of drawers interprets contemporary bedroom storage through generous volumes, measured details and research into the balance of proportions.
