

Axis is a sophisticated bookcase in which metal and marble come together in a balance of structural lightness and textural richness. The vertical metal frame defines a minimalist, contemporary space, while the shelves in fine stone seem to float, adding depth and a unique character thanks to their natural veining.

A sculptural piece, it enhances any room, from the living room to the study. It can be used individually or paired to create even more striking arrangements.

HESSENTIA can customize this piece to suit your project needs. Some limitations apply.
