Snap

NIGHT TABLE

Snap is a compact night table designed to follow the rounded shapes of the coordinated bed. It belongs to the Snap collection and completes the curve of the headboard through an amorphous geometry.

The structure features soft lines and a profile designed to fit harmoniously beside the bed. The relationship between the two products creates a continuous composition, avoiding the perception of elements that have merely been placed next to one another.

Snap is available in right and left versions: the two configurations ensure a seamless fit with the shape of the headboard on both sides of the bed.

The structure can be customized through different lacquer finishes, while the top is made of marble. Natural stone creates a material contrast with the chromatic continuity of the lacquered body.

Snap night table can also be used independently, but finds its most complete expression when paired with the bed from the same collection.

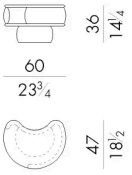

Handmade in Italy, Snap interprets storage through integrated design, organic shape and the dialogue between lacquer and marble.
