Cheope

TABLE

Generated: 04/11/2026

Cheope is a HESSENTIA table with a strong decorative identity, designed to interpret the dining area through a dialogue between a marble top and bases covered in a thin metal sheet with a bark-effect artistic finish. Its design arises from the balance of natural surface, three-dimensional texture and colour finishes selected to enhance the chosen marble.

The decoration of the bases transforms the table's support into an expressive element. The metal sheet, shaped by hand, creates reliefs, reflections and perceptual variations that change with light, giving the surface depth and each piece a different visual and tactile appearance.

Available in a round version and other size configurations, Cheope suits dining areas of different sizes, from more intimate ambiences to larger dining spaces. The result is a contemporary Made in Italy table in which marble, bark-effect metal and artistic finishes create a recognisable material language.

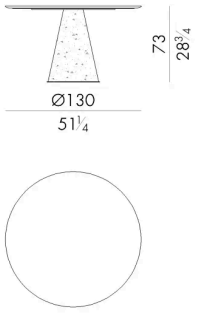

HESSENTIA can customize this piece to suit your project needs. Some limitations apply.
