# Donald

## COFFEE TABLE

Donald coffee table is distinguished by its trumpet-shaped metal base, which represents a soft, recognisable geometry supporting the marble top with balance and visual lightness. The horizontally engraved metal structure follows the vertical volume, introducing an elegant presence that adapts naturally to different living settings.

The contrast between natural marble and the metal finish defines a refined dialogue between material, light and proportion. Polished and matt versions allow its character to be adjusted, from more discreet to more striking, according to the ambience and chosen combinations.

Available in several sizes, Donald can be used individually or in different compositions, creating functional, decorative accents beside sofas, armchairs and lounge areas. Within HESSENTIA's design language, it is a versatile, sophisticated coffee table combining marble, metal and Handmade in Italy design.
