Wabi

ARMCHAIR

Generated: 24/11/2026

Wabi is a sculptural armchair in white concrete, defined by pure geometric blocks, essential volumes and rigorous architectural lines. The design interprets Bauhaus principles through a composition in which shape, function and material merge.

The structure develops as a single system of surfaces and volumes. Seat, back and supports are integrated into a continuous geometry without overlapped elements, giving the armchair a solid and immediately recognizable presence.

In the HESSENTIA vision, concrete becomes a furnishing material with strong expressive value. Its surface introduces visual and tactile variations that enhance the clarity of the shapes, while hand workmanship makes the relationship between material, design and manufacturing perceptible.

Despite the solidity of the volume, the proportions are designed to create a functional and welcoming seat. The contrast between the rigorous character of concrete and the inclination defines a balance between architectural presence, ergonomics and comfort.

Wabi armchair can be introduced into contemporary interiors, hospitality ambiences, covered terraces, verandas and protected porticos. Its generous size and essential language allow it to become a stand-alone element capable of organizing the perception of space.

Handmade in Italy, Wabi interprets contemporary armchair through textured concrete, geometric lines and formal research. It is a seat in which furniture design approaches architecture while keeping function, structure and material clearly legible.

If the product is intended for **outdoor use**, it should be used exclusively in covered outdoor spaces protected from weather agents, such as verandas, porches, and covered terraces.
To preserve the aesthetic, functional, and material qualities of the products over time, weekly routine maintenance is highly recommended.
Furthermore, any food and drink residues, leaves, flowers, pollen, or bird droppings should be removed promptly to prevent prolonged contact with the surfaces from compromising the long-term preservation of the products.
