Cadrega

CHAIR

Cadrega4two is a double vis-à-vis seat made entirely of bronze through artistic metal casting. It adopts the minimal design of the Cadrega chair, transforming it into a composition conceived to encourage dialogue, encounters and a more direct connection between people.

The two seats face opposite directions while forming part of a single structure. This configuration creates a sculptural, dynamic presence that can be viewed and used from different perspectives.

Minimal geometry highlights bronze as the material of the entire design. Structure, seats and backrests come together in a continuous composition in which function remains clear while preserving the expressive strength of the material.

The surface has a polychromatic effect created by exposed welding. Colour variations, reflections and traces of craftsmanship highlight the connections between the different parts, making each piece one of a kind.

Cadrega4two is obtained through artistic casting, a process that brings the traditional sand-casting technique into contemporary design. Handcraftsmanship shapes the metal and preserves subtle, controlled irregularities on the surface, reflecting the artisanal nature of the process.

The double seat can be used in contemporary interiors, galleries, hospitality spaces and ambiences dedicated to conversation. It is also available in an outdoor version, intended exclusively for verandas, porticoes, covered

terraces and other spaces protected from the weather.

Handmade in Italy, Cadrega4two interprets seating as a place for connection and as a piece of collectible design, bringing together bronze, artistic casting and design identity.

If the product is intended for **outdoor use**, it should be used exclusively in covered outdoor spaces protected from weather agents, such as verandas, porches, and covered terraces.
To preserve the aesthetic, functional, and material qualities of the products over time, weekly routine maintenance is highly recommended.
Furthermore, any food and drink residues, leaves, flowers, pollen, or bird droppings should be removed promptly to prevent prolonged contact with the surfaces from compromising the long-term preservation of the products.
