

Cadrega4two is the expression of a minimalist design, entirely made of cast bronze. Its surface is characterised by a polychrome effect given by the visible welding, which emphasises the contemporary aesthetics of the 'vis à vis' double seat by creating a game of visual and tactile contrasts. The artistic casting process with which Cadrega4two is made combines the ancient art of sand casting with the new language of design. Even today, in fact, sophisticated manual processes are used to shape the material and transform it from a raw material into a unique work of art.
